

Job Offered: Junior Database Developer

Swist Tech delivers services and solutions in the Information and Communications Technology industry. We seek energetic, self-motivated and enthusiastic people for our elite Development Team. Our Enterprise products are mostly directed towards the South African GSM telecommunication industry.

Personal Profile

We require dedicated people with the following attributes:

- Analytical and technically minded;
- Ability to handle pressure;
- Good communication skills, written and verbal;
- Ability to own issues and follow them through to resolution;
- Ability to transfer knowledge within the team;
- Well presented and a good team player;
- Self motivated and deadline orientated;

Key Performance Areas

Duties will be focused on the Oracle RDBMS and related products and include, but are not limited to, the following:

- Administration:
 - Implement/maintain database backup and disaster recovery solutions.
 - Database performance tuning.
 - Investigate/test Oracle products and utilities.
- Development:
 - Work with back end and front end developers to design and implement effective solutions.
 - Create technical specifications, operations manuals, deployment plans, etc.
 - Implement schema objects such as Tables and Indexes.
 - Develop Packages, Procedures, Triggers and Functions.
 - Deploy and support product releases.

Prerequisites

- A basic grasp and understanding of database concepts.
- A three year degree or diploma.

Having the following will count in your favour:

- Experience working with Oracle 8/9i/10g/11g.
- Experience working with PL/SQL Developer.
- Oracle Certified Associate (OCA) (9i/10g/11g) or Oracle Certified Professional (OCP) (9i/10g/11g)

Contact Information
